Roughly two thirds of home fire deaths happen in homes with no smoke alarms or no working smoke alarms.

Smoke alarms should be installed on every level of the home, outside each sleeping area and inside each bedroom.

For the best protection, interconnect all the smoke alarms so when one sounds, they all sound.

Replace smoke alarms 10 years from the date of manufacture.

Test all smoke alarms at least once a month by pushing the test button.

When the smoke alarm sounds, get outside and stay outside. Go to your outside meeting place. Call the fire department from a cell or neighbor's phone. Stay outside until the fire department tells you it is safe to go back inside.
